EDUCATION

CSMSS CSCOE
B.Tech in Artificial Intelligence and Data Science
July 2021 -- June 2024 | MH, India
CGPA: 7.94 / 10.0

COURSEWORK

Data Structures & Algorithms
Machine Learning
Deep Learning
Natural Language Processing
Cloud Computing
Google Cloud Platform
Database Management Systems
ETL Pipelines & Big Data
Time-Series Analysis

SKILLS

PROGRAMMING
Python • R • SQL
Node.js
DATABASES
MySQL • MongoDB
DATA SCIENCE
TensorFlow • Keras • OpenCV
Pandas • NumPy • LSTM
Scikit-learn • NLP
Random Forest • Agentic AI
TOOLS
Git • Docker • GCP
FastAPI • REST APIs • ETL
Voice AI • Conversational AI

CERTIFICATIONS

AI Engineer Core Track
LLM, RAG, QLoRA, Agents
Google AI Essentials
Coursera
Career Essentials in Gen AI
Microsoft & LinkedIn
Stats & ML for Data Science
Learnbay
FastAPI Complete Course
Udemy
Data Analytics A–Z Python
Udemy

EXPERIENCE

AMEALIO | Data Engineer
Jan 2026 -- Aug 2026 | Pune, MH

- Engineered high-throughput RAG and ETL data pipelines in the cloud to feed vector stores for enterprise AI applications.
- Automated document chunking, embeddings extraction, and real-time ingestion to optimize retrieval context for downstream LLMs.
- Implemented containerized storage solutions and strict data-validation workflows, ensuring zero-latency sync across services.

ASKIMO.AI SOLUTIONS | Software Engineer (AI)
Sep 2025 -- Jan 2026 | Pune, MH

- Built Voice AI agents on Speech-to-Speech engines so live customer conversations stayed fluid and low latency.
- Designed self-learning agentic workflows that automated customer journeys and cut how much support had to be done by hand.
- Shipped high-throughput backend services in Python and Node.js, and deployed them with Docker so the APIs could scale.

NAVADR SOLUTIONS | Junior Data Engineer
Dec 2024 -- Aug 2025 | Pune, MH

- Engineered end-to-end ML pipelines for churn and completion prediction, landing at 89–90% accuracy.
- Built a skill-gap recommendation engine that reached 92% accuracy using collaborative filtering.
- Tuned Random Forest models for sales targeting to a 0.92 F1-score with GridSearchCV.

PROJECTS

HEALTHCARE CHATBOT | Python, LSTM, NLP

- Architected a voice-enabled LSTM model that reads symptom text and flags likely conditions at 85% accuracy.
- Improved inference speed by 15% by cleaning the natural-language parsing step before the model runs.

HUMAN ACTIVITY RECOGNITION | Deep Learning, Time-Series

- Built an LSTM time-series classifier that recognizes human activity from sensor data at 95% accuracy.
- Raised data processing speed by 40% by refining the training pipeline that feeds the model.

ACHIEVEMENTS

- Accelerated model training and preprocessing throughput by **40%** across production ML pipelines.
- Held **92%** accuracy on recommendation systems and a **0.92 F1-score** on classification models.
- Shipped low-latency Speech-to-Speech agents and agentic workflows that cut manual support.
